the 1990s, the number of people in the United States who are obese has increased by 50% (Flegal et al. 2002). In the United Kingdom, the prevalence of obesity has increased from 10% in 1980 to 16% in 1997 (Health Survey for England 1997). In the United States, the prevalence of obesity has increased from 15% in 1980 to 23% in 1994 (Flegal et al. 2002).

Obesity is a complex condition, with many causes and consequences. It is a leading cause of death and disability in the United States, and is associated with a number of health problems, including heart disease, diabetes, and cancer. Obesity is also a leading cause of disability in the United States, and is associated with a number of social problems, including discrimination and poverty. Obesity is a complex condition, and it is important to understand the causes and consequences of obesity in order to develop effective interventions.

Obesity is a complex condition, with many causes and consequences. It is a leading cause of death and disability in the United States, and is associated with a number of chronic diseases, including heart disease, diabetes, and cancer. Obesity is also a major risk factor for many other health problems, including high blood pressure, high cholesterol, and asthma. In addition, obesity is associated with a number of psychological problems, including depression and anxiety.

There are many factors that contribute to obesity, including genetics, diet, and lifestyle. In the United States, the prevalence of obesity has increased significantly in the past few decades, and this is largely due to changes in diet and lifestyle. In the United Kingdom, the prevalence of obesity has also increased, but at a slower rate than in the United States.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995. The public sector has also become an important employer of women, with 5.5 million women employed in the public sector in 1995, compared with 4.5 million in 1980.

There are a number of reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of women in its workforce. In 1995, 80% of the public sector workforce were women, compared with 60% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

Another reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are part-time or flexible. This is because the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work. These jobs are often part-time or flexible, which makes them more attractive to women.

A third reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are well-paid. This is because the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work. These jobs are often well-paid, which makes them more attractive to women.

There are a number of other reasons why the public sector has become an important employer of women. For example, the public sector has a high proportion of jobs that are secure, and it has a high proportion of jobs that are well-located. These factors also make the public sector an attractive employer for women.

In conclusion, the public sector has become an important employer of women in the UK. This is due to a number of factors, including the fact that the public sector has a high proportion of women in its workforce, a high proportion of jobs that are part-time or flexible, and a high proportion of jobs that are well-paid. These factors make the public sector an attractive employer for women.
